

Dear Educator,

I am pleased to share a new program from Discovery Education and Trane Technologies that will help bring real-world sustainability goals and careers to your classroom! We have partnered to present **Sustainable Futures** – a robust suite of resources to inspire students to learn, explore, innovate and lead us to a healthier world.

Sustainable Futures shows students how they can get involved in creating solutions; takes them into the field for up-close STEM explorations, and introduces them to a variety of green careers responsible for today's innovative sustainability solutions.

There are two ways you can bring Sustainable Futures into your classes.

1. Invite a Trane Technologies employee to visit virtually or in-person so they can share their unique expertise on sustainability, STEM skills, and in-demand green careers. Your school or afterschool program can request a virtual visit from a volunteer who will discuss their career and take students on our NEW Virtual Field Trip—all you need to do is sign up [here](https://sustainablefutures.discoveryeducation.com).
2. Not quite ready for a volunteer visit, but still interested in introducing sustainability to your classroom? We encourage you to spark everyday sustainability explorations wherever students grades 5-10 are, with standards-aligned resources that help them see opportunities for change in the world around them. Check out the resources at: <https://sustainablefutures.discoveryeducation.com>

We look forward to connecting with you on this exciting opportunity!

Trane Technologies
